

Workshop announcement:

Students, science, engineering and global ethics or How not to be an imperialist as a (becoming) scientist

- Did you ever wonder where *the stuff in the lab* actually comes from?
- Does research harm human rights?
- Do you have a **moral obligation** to invent ecological things?
- Is **science** free from *economic and political* interests?
- For what goal do you study?
- What about **ethics** and why do we so rarely talk about it as scientists or engineers?
- At *university*, are you evolving as a human or becoming a narrow-minded specialist?

If some of these questions are on your mind despite being successful in the next exam, then come to the workshop. It takes place

Friday, 12th of July 2019 from 2-4pm

Location: Rachel Carson Center, Leopoldstr. 11a, 4th Floor, Room 415 (conference room)

I am a physics student in the master, who is concerned with these questions. You can come spontaneously, but **if you are interested to participate, please let me know**, so that I can better organize the workshop. Just drop me a line to my

email: J.Feucht@physik.lmu.de

You don't need any previous knowledge. It will be interactive. Participants are invited to the unofficial follow-up program, which takes place at the English Garden if the weather allows it.

I conduct this workshop as my final project of the Environmental studies certificate program of the Rachel Carson Center for Society and Environment.
